3 AUGUST 2026

PARTNERSHIP OPPORTUNITIES: NIGERIA FINTECH SUMMIT 2026

PREPARED FOR	Adeseko Samuel (Technical) and Akinbayo (Business), Cofounders
PURPOSE	To record the five partnership conversations held at the summit, set out what each one is actually worth to us, and name what must be confirmed before we commit money or sign anything
STATUS	Working document. Every figure attributed to a conversation is recorded as recollection, not as fact, until confirmed in writing by the counterparty.

1. SUMMARY

OPEN ACCESS DATA CENTRES	Referral of colocation clients for commission, plus a site tour offered. Low risk, no cost to us.
SNAPNET LIMITED	Referral or reseller of cloud services through their AWS practice, plus joint training and outreach. Low risk, no cost to us.
LSEG	Access to their data for verification work, against a fee recalled as £5,000. The only opportunity here that costs us money before it earns any. Treat with care.
CORALPAY	Integration of their payment API into our platforms. Technical work, commercially straightforward.
NORSH	Referral discussion. We could not verify the company from the name as recorded. Confirm the spelling and who we met.

Four of the five cost us nothing but effort and are worth pursuing immediately. One of them, LSEG, involves a recurring foreign currency commitment that could reach a scale this company cannot absorb on a guess. That one needs a written quote before another conversation happens.

2. OPEN ACCESS DATA CENTRES (OADC)

2.1 WHO THEY ARE

Open Access Data Centres is the data centre arm of WIOCC Group, operating carrier neutral colocation facilities across Africa. Their Lagos site, LOS1, sits at Lekki on roughly four hectares, with over 7,200 square metres of white space, capacity for around 3,200 racks, and site load scaling towards 20MW. Google's Equiano subsea cable lands there, and it was the first facility in their network to earn Uptime Institute certification. They serve telcos, internet service providers, cloud operators, and large enterprises across up to twenty African countries.

2.2 WHAT WAS DISCUSSED

Two things. They offered us a tour of the facility, and they raised the same referral arrangement we discussed elsewhere: we bring clients who need colocation or interconnection, and we earn a commission on what those clients spend.

2.3 WHY IT MATTERS TO US

- It gives us a credible answer when a client asks where their infrastructure will physically live, which is a question that comes up constantly in regulated sectors and in any conversation about data residency.
- A facility with Uptime certification and a subsea cable landing is a genuine differentiator we can point to rather than a claim we have to defend.
- The tour is free reconnaissance. Take it, take photographs if permitted, and let our content strategist turn the visit into material.

2.4 WHAT TO CONFIRM

- The commission rate, whether it is paid once or recurring, and how long we keep earning on a client we introduce.
- Whether they operate a formal referral or reseller programme with a written agreement, or whether this is a handshake.
- Whether we register a deal before introducing a client, so a client we bring cannot later be treated as theirs.
- Whether commission is paid in naira or in dollars, and on what payment terms.

3. SNAPNET LIMITED

3.1 WHO THEY ARE

Snapnet is a Nigerian technology consulting firm working in cloud, artificial intelligence, cybersecurity, enterprise resource planning, and data analytics, with partnerships including Amazon Web Services, Microsoft, Google, Huawei, and Oracle. Their AWS relationship is real and current: at the summit they appeared as joint platinum sponsor alongside AWS, with their chief executive speaking on data sovereignty.

3.2 WHAT WAS DISCUSSED

A referral arrangement in which we introduce clients who need cloud resources and earn a commission on the business, and separately a joint effort on cloud training and outreach.

3.3 WHY IT MATTERS TO US

- It is the fastest route to selling cloud infrastructure without holding AWS partner status of our own, which takes time and revenue commitment to earn.
- The training angle lines up directly with FSLabs Training. Their AWS relationship can put credible cloud content and possibly AWS credits or materials in front of our trainees.
- It puts us next to a firm already trusted by enterprise clients, which shortens our own credibility gap.

3.4 WHAT TO CONFIRM

- Commission structure and rate, and whether it applies to the initial contract only or to renewals.
- Whether we are a referral partner, who is paid for an introduction, or a reseller, who carries the client relationship and the billing. The difference decides who owns the client.
- Whether they will support our training programme with materials, credits, or instructor time, and on what terms.

- Whether working through them blocks us from becoming an AWS partner directly later.
- Whether they expect exclusivity from us in cloud.

4. LSEG

4.1 WHAT WE BELIEVE WAS DISCUSSED

The discussion, as recalled, was that LSEG would supply data for us to review or verify at volume, against a fee of about £5,000, either monthly or annually. Verification at scale is consistent with what LSEG sells through LSEG Risk Intelligence, whose World-Check service supplies risk and screening data used for Know Your Customer checks, anti money laundering screening, and third party due diligence. World-Check is available through a REST and JSON API, World-Check One, and is sold through packages that draw on an allocation of usage points rather than a flat feed. LSEG separately licenses market data through a redistributor programme, which is a different product with different rules. Which of the two was actually on the table changes everything about this deal.

> **The single most important open question.** £5,000 monthly is £60,000 a year. £5,000 annually is £5,000 a year. Those are not variations of the same offer, they are a twelvefold difference, and at current rates the monthly reading is a commitment well over one hundred million naira a year before we have earned a single naira from it. Nothing further should be agreed, and no internal plan should assume this data, until we hold a written quote from LSEG stating the product, the fee, the billing period, and the volume it covers.

4.2 WHAT WE COULD AND COULD NOT CONFIRM

- Confirmed: LSEG Risk Intelligence and World-Check exist, are sold to institutions for verification and screening work, and are reachable through a documented API.
- Confirmed: LSEG does not publish enterprise pricing. Screening and market data contracts are quoted case by case, which is why no public figure either supports or contradicts the £5,000 recollection.
- Not confirmed: the £5,000 figure, the billing period, the product, and the volume of records it would cover. None of this is public, and none of it should be assumed.
- Not confirmed: whether the arrangement described is a customer licence, a partner arrangement, or a reseller right. Whether we may pass this data to our own clients depends entirely on which one it is.

4.3 WHAT TO SETTLE BEFORE SPENDING ANYTHING

- Get the product named in writing, along with the fee, the billing period, the contract term, and any minimum commitment or notice period for exit.
- Establish the volume the fee covers and the cost of exceeding it. Verification products are usually metered, and overage is where budgets die.
- Establish in writing whether we may resell, redistribute, or expose the data to our own clients, and whether that requires a separate licence or approved partner status.
- Confirm whether the fee is fixed in pounds. If it is, we carry the currency risk on every renewal, and that risk must be priced into whatever we charge clients.
- Work out what we would charge, and to whom, before we sign. A recurring foreign currency cost with no committed client revenue behind it is not a partnership, it is an expense.

- Check our obligations under the Nigeria Data Protection Act before handling personal data at this volume. Screening data is sensitive by nature and the compliance burden sits on us, not on LSEG.

4.4 RECOMMENDATION

Pursue it, but slowly and in writing. Ask the promotions manager to route us to the Risk Intelligence or market data team for a formal quote, and say plainly that we are a young firm sizing the opportunity. There is no advantage in appearing larger than we are and then failing to pay. If the figure turns out to be £5,000 monthly, the honest answer is that we are not ready this year, and we should say so and keep the relationship warm instead of overcommitting.

5. CORALPAY

5.1 WHO THEY ARE

CoralPay is a Nigerian payment switching and processing company serving banks, financial institutions, businesses, and fintechs in Nigeria and the wider West Africa region. Their products include a payment gateway that aggregates several payment channels at checkout, C'Gate USSD for payments initiated by USSD code, BankLink for payment by bank transfer, transaction switching and processing, DigiPOS, and FinPay. They publish a developer portal.

5.2 WHAT WAS DISCUSSED

Using their payment API inside our platforms so that our products can reach their payment products. For us that most obviously means FS Exchange and paid enrolment in FSLabs Training.

5.3 WHAT TO CONFIRM

- Which specific products we would integrate, and whether USSD and bank transfer are included or priced separately. USSD matters in Nigeria for customers without reliable card access.
- The commercial model: fee per transaction, percentage, settlement period, and whether there is a monthly platform charge.
- Whether they offer a partner or aggregator arrangement in which we earn a share on transactions we bring, as distinct from simply being their customer.
- Sandbox access, documentation quality, and what compliance and licensing checks they require of us before going live. This is where integrations stall.
- Where responsibility sits for chargebacks, failed settlements, and reconciliation disputes.

Note that we could not read their developer documentation directly, as the site refused automated access. Samuel should review the portal manually before we scope any integration work.

6. NORSH

We could not identify this company from the name as recorded, and nothing in the public record matches it clearly enough to write about honestly. Before we do anything here we need the correct company name and the name and title of the person we spoke to. A business card, a photograph of one, or a LinkedIn connection would settle it. Until then this entry stays open rather than filled with guesses.

7. WHAT APPLIES TO ALL OF THEM

1. **Nothing is real until it is written.** Every one of these conversations happened at a summit, where enthusiasm is free. Ask each counterparty for their terms in writing. The ones who will not put a commission rate on paper were never a partnership.
2. **Referral and reseller are different businesses.** As a referrer we are paid for an introduction and lose the client. As a reseller we own the relationship, the billing, and the support burden, and we earn considerably more. Decide which we want in each case before negotiating, because it is hard to change later.
3. **Protect the client relationship.** Where we introduce a client, register the introduction in writing beforehand, and agree how long our commission survives. Otherwise our best introduction becomes their account.
4. **Do not sell what we cannot yet deliver.** Three of these would have us promising infrastructure, cloud, or data capability we do not operate. Sequence them against what our team can actually support while we are onboarding new staff.
5. **Currency risk sits with us.** Any fee denominated in pounds or dollars must be priced into client charges with room for the naira to move, or a profitable deal becomes a loss on renewal.
6. **Data protection is not optional.** Any arrangement involving personal data, and the LSEG opportunity in particular, brings obligations under the Nigeria Data Protection Act. As a firm that sells security, being careless here would cost us more than the revenue is worth.

8. NEXT STEPS

IMMEDIATELY	Accept the OADC tour and set a date. Confirm the correct name and contact for Norsh. Both are free and both expire quickly if we go quiet. *Akinbayo.*
THIS WEEK	Write to Snapnet and OADC for referral or reseller terms in writing, including commission rate, duration, and deal registration. Ask LSEG for a formal quote naming the product, fee, billing period, and volume covered, and do not negotiate before it arrives. *Akinbayo.*
THIS WEEK	Review the CoralPay developer portal and sandbox, and produce a short assessment of integration effort for FS Exchange and Training enrolment. *Samuel.*
BEFORE SIGNING ANYTHING	Confirm our position under the Nigeria Data Protection Act for any arrangement that touches personal data. *Samuel, with external advice if needed.*
ONGOING	Keep this document current. Replace each recollection with the written terms as they arrive, so we stop working from memory.

Prepared and issued by,

Adeseko Samuel
