

COURSE BROCHURE & SYLLABUS

# Full Stack Development.

Master the complete web development stack – frontend frameworks, backend servers, databases, and cloud deployment. Build real, production-ready projects and deploy them live.

- Self-Paced
- 12 Weeks
- Intermediate Level
- Lifetime Access
- Certificate on Completion

₦79,000

One-time payment · Full lifetime access to course materials

## What's Included

- ✓ Weekly lessons, classwork & assessments
- ✓ Auto-graded quiz at the end of every week
- ✓ Direct "Request a Call" support if you get stuck
- ✓ Self-paced – no deadlines, learn on your schedule
- ✓ Built and taught by FSLabs' own engineers

## Core Topics

- HTML / CSS
- JAVASCRIPT
- REACT
- NODE.JS / EXPRESS
- POSTGRESQL
- REST APIS
- AUTH & JWT
- GIT & CI/CD
- CLOUD DEPLOYMENT

## 12-Week Roadmap

|                                |                                                                                                                                                                                                                                                                            |
|--------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>WEEK 01</b><br>LIVE NOW     | <b>Web Fundamentals – HTML &amp; CSS</b><br>How the web works, HTML5 semantics, the CSS box model, and responsive layout with Flexbox & Grid.<br>Includes: 4 lessons · classwork (portfolio landing page) · assessment (recreate a hero section) · 15-question graded quiz |
| <b>WEEK 02</b><br>COMING UP    | <b>JavaScript Fundamentals</b><br>Variables, control flow, functions, and the language mechanics every web app is built on.                                                                                                                                                |
| <b>WEEK 03</b><br>COMING UP    | <b>The DOM, Events &amp; ES6+</b><br>Making pages interactive – event handling, modern JavaScript syntax, and browser APIs.                                                                                                                                                |
| <b>WEEK 04-05</b><br>COMING UP | <b>React Essentials</b><br>Components, props, state, hooks, and routing – building real user interfaces.                                                                                                                                                                   |
| <b>WEEK 06</b><br>COMING UP    | <b>Node.js &amp; Express</b><br>Server-side JavaScript, building your first APIs.                                                                                                                                                                                          |
| <b>WEEK 07</b><br>COMING UP    | <b>REST APIs &amp; Authentication</b><br>Designing clean APIs and securing them with JWT-based auth.                                                                                                                                                                       |
| <b>WEEK 08</b><br>COMING UP    | <b>Databases – PostgreSQL</b><br>Relational data modeling and connecting a real database to your backend.                                                                                                                                                                  |
| <b>WEEK 09-10</b><br>COMING UP | <b>Full Stack Integration &amp; Testing</b><br>Connecting frontend to backend end-to-end, plus testing and best practices.                                                                                                                                                 |
| <b>WEEK 11</b><br>COMING UP    | <b>Git, CI/CD &amp; Cloud Deployment</b><br>Version control workflows and shipping your app live.                                                                                                                                                                          |
| <b>WEEK 12</b><br>COMING UP    | <b>Capstone Project</b><br>Build and ship a full production-ready application from scratch.                                                                                                                                                                                |
