

FOLUB & SAMUEL LABS

About FSLabs

An introduction to the company, for our team, staff,
instructors and collaborators. The same story we tell clients.

LAGOS, NIGERIA · RC 9637480 · FSLABS.TECH
VERSION 1.0 · INTERNAL · 3 AUGUST 2026

Welcome

If you are reading this you are working with FSLabs, as an engineer, an instructor, a partner or a new team member. This document explains what the company is, what we sell, how we work, and the standard we hold ourselves to. Read it once properly. It is the same story we tell clients, and it only works if all of us tell it the same way.

Two companion documents go with this one. The **Company Handbook** covers our purpose, vision, values, priorities and positioning in full, including how to answer hard questions about the company. The **Staff Policy** covers hours, leave, pay, client data rules, ownership of work, and what to do when something goes wrong.

1. Who we are

Folub and Samuel Labs (FSLabs) is a technology and cybersecurity company incorporated in Nigeria.

We do three things.

- 1. We deliver technology services to clients.** Software, security, cloud, data and consulting.
- 2. We build and run our own products.** A marketplace, an HR platform, an exchange, and a city intelligence platform in development.
- 3. We train the next generation of engineers** through FSLabs Academy.

Our tagline: _Your Vision. Our Execution._

Our mission: to be the bridge between technology and business, connecting companies to real talent, delivering world class tech services, and building products that matter.

Our vision: to build and secure the systems Nigerian business runs on, and to train the engineers who will build the rest.

Company facts

LEGAL NAME	FOLUB AND SAMUEL LABS
Short form	FSLabs, one word
RC number	9637480
Incorporated in	Nigeria
Base	Lagos, Nigeria

LEGAL NAME	FOLUB AND SAMUEL LABS
Website	https://fslabs.tech
General email	folubandsamuel@fslabs.tech

2. The founders

FSLabs is a company of two founders, and that is deliberate. **Both founders work directly on every client project.** We do not hand work off to junior contractors or offshore teams. When a client engages FSLabs they get both founders, every single time.

Adeseko Samuel, Cofounder and Technical Lead. Samuel is the builder. A cybersecurity professional and full stack developer who carries the technical weight of FSLabs: system architecture, backend engineering, security implementation and product delivery. He thinks in systems, ships in weeks, and holds the standard that everything we release has to actually work, scale, and be secure from day one.

Akinbayo, Cofounder and Business Lead. Akinbayo is the business engine. He drives strategy, client relationships, partnerships and the commercial growth of everything we build. If FSLabs is moving, Akinbayo is making sure it moves in the right direction.

Two founders. One mission.

3. What we stand for

These four values are not decoration. They are how work gets judged here.

01 Innovation. We don't follow trends. We set them. Every solution we build pushes the boundary of what is possible.

02 Ambition. We think big, move fast, and refuse to settle. Small thinking has no place here.

03 Integrity. We say what we mean and deliver what we promise. No fluff, no shortcuts, no excuses.

04 Impact. Technology is just a tool. What matters is what it changes, for our clients and for the world.

4. What we sell: our six service lines

Know these. When someone asks what FSLabs does, this is the answer.

01 Software Development

Custom built. Production ready. We design and build web apps, mobile apps, APIs and enterprise software tailored exactly to requirements: scalable, maintainable, and shipped on time. Web and mobile applications, API development and integration, SaaS product development, legacy system modernisation.

02 Cybersecurity

Protect what matters most. In today's threat landscape, security is not optional. From penetration testing to full security operations, we build resilient security postures that hold. Penetration testing and assessments, security audits and compliance, threat intelligence and monitoring, incident response and recovery.

03 IT Consulting

Strategy meets execution. We work alongside leadership to evaluate the tech landscape, identify opportunities, and build a roadmap that supports lasting growth. Digital transformation strategy, technology roadmapping, IT infrastructure advisory, cloud architecture planning.

04 Tech Outsourcing

Scale your team, not your costs. Skilled engineers, QA specialists, DevOps leads and technical managers on demand, without the overhead of full time hiring. Dedicated engineering teams, staff augmentation, project based outsourcing, DevOps and cloud management.

05 Cloud Solutions

Modern infrastructure, built right. We help businesses migrate, manage and optimise cloud environments across AWS, GCP and Azure, from initial setup to cost optimisation. Cloud migration, infrastructure as code, cost optimisation, managed cloud services.

06 Data & Analytics

Turn data into decisions. We unlock the value in data: pipelines, dashboards and AI powered analytics that give teams clear, actionable insight. BI dashboards, data pipeline engineering, AI and ML integration, KPI reporting systems.

5. How we work: the FSLabs process

Four stages. Every engagement, no exceptions.

01 Brief. The client tells us what they need. We listen, ask the right questions, and understand the real problem **before touching a keyboard.**

02 Scope. We define the work clearly. Realistic timelines. Honest deliverables. No scope creep, no surprises.

03 Build. We do the work. Software gets built, systems get secured, solutions get shipped. **No status theatre.**

04 Deliver. The client receives something that works, is documented, and is ready for the real world.

That last line is the FSLabs standard. Works, documented, ready for the real world. If a piece of work fails any of those three it is not finished, regardless of the deadline.

What this means daily

- **Understand before building.** Questions early are cheap. Rework is not.
- **Scope honestly.** If a timeline is not realistic, say so during Scope, not during Build.
- **No status theatre.** Report real progress, including problems. Bad news early is a service. Bad news late is a failure.
- **Document as you go.** Documentation is part of delivery, not an optional extra.
- **Secure from day one.** Security is not a phase at the end.
- **We respond within 24 hours.** That is the promise on our contact form. Honour it.

6. FSLabs Academy

The Academy trains people into real engineering roles, taught by **practising FSLabs engineers** rather than career instructors. It is also our own talent pipeline: strong graduates are people we can hire and place.

Tracks

TRACK	FOCUS	INTRODUCTORY PRICE
Full Stack Development	Frontend, backend, DevOps	¥180,000
Ethical Hacking Fundamentals	Cybersecurity, penetration testing	¥175,000

TRACK	FOCUS	INTRODUCTORY PRICE
Machine Learning Foundations	AI, data science, Python	₦170,000
Backend Development	Servers, APIs, databases	₦160,000
Frontend Development	UI, React, responsive design	₦155,000
Prompt Engineering	AI tools, LLMs, automation	₦150,000

Introductory pricing is currently active. These are launch rates, discounted from standard pricing, and cohort sizes are limited. We also run tailored individual and small group certification programmes, priced by goal.

What every student gets

- **Live sessions.** Real time instruction from practising FSLabs engineers.
- **Portfolio projects.** Three or more real projects they own and can show employers.
- **An FSLabs verified certificate** of completion.
- **Individual mentorship** throughout the programme.
- **Session recordings.** Rewatch every class.
- **Alumni community.** Lifetime access to the FSLabs builder network.
- **Job support.** Placement referrals and career guidance.
- **Online first delivery,** in person on request.

If you teach for the Academy: you are the product. The promise is instruction from people who actually ship, and portfolio projects good enough to get someone hired. Hold that line.

7. Our products

We are not only a services company. We build and operate our own products, which is how we prove we can do what we sell.

TailorNow, at tailornow.shop

A marketplace for custom fashion in Nigeria. It connects customers to verified tailors and fashion creatives and handles the whole order end to end: discovery and portfolios, a style feed, booking, saved measurements, agreed pricing, payment with automatic split settlement to the creative, production tracking, fabric pickup and delivery, mutual ratings, and disputes. It supports group and aso ebi orders and corporate uniforms. Revenue model: 20% platform commission plus a 3% service charge.

HR & Payroll platform

Multitenant SaaS for Nigerian businesses: employees, departments, attendance, leave requests, documents, payroll records, audit logging and subscription billing. Because it holds employee personal data and salary records it carries the highest data protection obligation of anything we run. Treat it accordingly.

FSLabs Exchange

Crypto to naira and account services. USDT, gift cards and related requests, processed within about 30 minutes.

UrbanPulse

AI assisted citizen reporting and transport intelligence for African cities. In active development and not yet open to users, so describe it as what we are building rather than what we offer. It is our route into public sector and smart city work, which none of the other three products reach.

8. Where we are, and our clients

Client work is the core of the business we are building. Be straight about the stage we are at, because a claim we cannot back is worth less than an honest position.

What we can show. Four products we designed, built and operate ourselves, three of them working today. Teaching experience that predates the company's registration, and a free bootcamp running this August. Small paid pieces of work completed.

What we have not done yet. No full client project delivered under FSLabs. No paid security engagement, so cybersecurity is a capability we are taking to market rather than a delivery history. No client we can name as a reference.

None of that is a reason to be apologetic. Building four products is more than most firms at our age can show, and it is the honest version of a track record. The Company Handbook has the exact wording for answering this when a client asks.

Note for the team: never claim work we have not done, and never name a client publicly, in a pitch deck, on social media, in a portfolio or in a conversation outside FSLabs, without confirmed written permission. Named projects are listed here once that permission is in place.

9. How we talk about the company

Consistency matters more than cleverness. Use this language.

In one sentence:

Folub & Samuel Labs is a Nigerian technology and cybersecurity company. We build software, secure systems, train engineers, and ship our own products.

Our differentiator, in one sentence:

Both founders work directly on every project. Nothing is handed off to junior contractors or offshore teams.

Naming. The company is **Folub and Samuel Labs**. **FSLabs** is the short form and is fine everywhere. "FS Labs" as two words is not our house style. Use **FSLabs**.

Things to get right

- **Never claim work we have not done.** No invented client engagements, and never let our list of service lines be heard as a list of completed projects.
- **FSLabs is FSLabs.** Never present another company, a client's or anyone else's, as part of FSLabs, as a sister brand, or as one of our products. Our portfolio is TailorNow, the HR and Payroll platform, FSLabs Exchange, and UrbanPulse. Nothing else.
- **A product is not the company.** TailorNow is a product of FSLabs. "The company" means FSLabs.
- Do not promise timelines or pricing to a client without a founder's sign off. Either founder can give it.
- Do not share client names, client code, pricing or internal delivery economics outside the company.
- **Client data never goes into third party AI tools.** See the Staff Policy.
- **Security work in particular:** what we find on a client's systems never leaves FSLabs.

10. Who to go to

FOR	GO TO
Architecture, security, technical decisions, code review	Adeseko Samuel
Clients, scope, pricing, timelines, partnerships, anything commercial	Either founder. Both attend to clients and both can agree terms
Something has broken or may have been breached	Both founders, immediately, whatever the hour
Anything you are unsure about	Ask early, either founder. Both are on every project, so use that.

General enquiries reach us at **folubandsamuel@fslabs.tech**, and the commitment on our contact form is a response within 24 hours.
