

FOLUB & SAMUEL LABS

Company Handbook

Purpose, mission, vision, values, goals and positioning —
everything you need to understand FSLabs, onboard into it,
and defend it in a room.

LAGOS, NIGERIA · RC **9637480** · **FSLABS.TECH**
VERSION 1.0 · INTERNAL · 3 AUGUST 2026

How to use this document

This handbook exists to make three specific things possible.

1. Onboarding. A new team member should be able to read this and understand what FSLabs is, why it exists, how it makes money, how work gets judged, and what is expected of them — without a founder having to explain it verbally.

2. Representing the company. Every one of us will at some point be asked "so what does FSLabs actually do?" or "why should we use you instead of a bigger firm?" Part IV gives you the answers. You should be able to defend this company in a room without a founder present.

3. Content and go-to-market. Our content strategist needs to know what we stand for, who we're talking to, what we sound like, and what we're trying to achieve before they can build a plan. Parts III and IV are written for that.

One important note on status

Some of what follows is **established fact** — our legal identity, our service lines, our process, our values. These come from the company as it already operates.

Other parts are marked **[DRAFT – needs founder approval]**. These are proposals: a vision statement, goal shapes, target numbers. They are written so there is something concrete to react to, not because they have been decided. **Nothing marked DRAFT should be used externally until Samuel and Akinbayo confirm it.** Where a number is genuinely unknown it is left as rather than invented.

PART I — WHO WE ARE

1. FSLabs at a glance

LEGAL NAME	FOLUB AND SAMUEL LABS
Short form	FSLabs — one word. Never "FS Labs".
RC number	9637480
Incorporated	Nigeria
Base	Lagos, Nigeria
Website	https://fslabs.tech
Email	folubandsamuel@fslabs.tech
Founders	Adeseko Samuel (Technical) · Akinbayo (Business)
Tagline	Your Vision. Our Execution.
What we are	A technology and cybersecurity company
How we earn	Client services · our own products · the Academy

2. Why FSLabs exists

Every company has a founding frustration. Ours is about **delivery**.

Nigerian businesses that need software have two bad options. They hire a large firm and become a small account — the senior people who won the pitch disappear after the kick-off, the work goes to whoever is available, and status meetings replace progress. Or they hire cheap and fast, and get something that demos well, breaks under real use, was never documented, and was never secured.

Both failures have the same root cause: **the people who promised the work are not the people who do it.**

FSLabs is built to remove that gap. Two founders, both technical enough and commercial enough to be accountable, on every single project. When a client engages us, they get Adeseko Samuel on the technical side and Akinbayo on strategy and delivery. Every time. Nothing is handed off to junior contractors or offshore teams.

That is not a marketing position. It is the operating constraint we designed the company around, and it is why our process (§7) looks the way it does.

Say this out loud until it's natural: *most technology firms sell you senior people and deliver junior ones. We only have senior people, and they're the ones on your project.*

3. Vision

[DRAFT — needs founder approval]

****To be the technology partner Nigerian businesses trust with the work that actually matters — and the place where Nigeria's best engineers are made.****

Two halves, deliberately:

- **"the work that actually matters"** — not brochure websites. The systems a business cannot afford to have fail: payments, payroll, customer data, security posture. Trust is the asset we are building, and it compounds.
- **"where Nigeria's best engineers are made"** — the Academy is not a side business. It is how we scale past two founders without breaking the promise in \$2, and how we build a talent bench the competition doesn't have.

If the founders want a different vision, replace this section — but keep it to one sentence that says where we are going, not what we do. What we do is the mission.

4. Mission

****To be the bridge between technology and business — connecting companies to real talent, delivering world-class tech services, and building products that matter.****

This is the company's existing mission statement and it holds. Read it as three commitments:

1. **Connecting companies to real talent.** Through outsourcing and through the Academy. "Real" is the operative word — vetted, practising, accountable.
2. **Delivering world-class tech services.** World-class means the standard doesn't drop because the client is in Lagos rather than London.
3. **Building products that matter.** We ship our own products, and that is what proves the first two are true.

5. The standard

Everything we release has to **work, be documented, and be ready for the real world.**

If a piece of work fails any one of those three, it is not finished — regardless of the deadline. This is the single sentence to fall back on when you are unsure whether something is ready.

Samuel's version of it: everything we release has to actually work, scale, and be secure from day one. Security is not a phase at the end.

6. Values

Four values. They are not decoration — they are how work gets judged here. Each one below has a "looks like" and a "does not mean", because a value you can't apply on a Tuesday afternoon isn't a value.

01 · Innovation

We don't follow trends — we set them. Every solution we build pushes the boundary of what's possible.

- **Looks like:** proposing the approach nobody asked for because it's genuinely better; using new tooling where it earns its place; building our own products instead of only billing hours.
- **Does not mean:** novelty for its own sake, or putting a client's production system on something unproven to satisfy our curiosity.

02 · Ambition

We think big, move fast, and refuse to settle. Small thinking has no place here.

- **Looks like:** going after the enterprise client rather than the safe small one; shipping weekly; treating "that's how it's done in Nigeria" as a challenge rather than a limit.
- **Does not mean:** over-committing on timelines. Ambition is about what we aim at, not what we promise a client on a call.

03 · Integrity

We say what we mean and deliver what we promise. No fluff, no shortcuts, no excuses.

- **Looks like:** telling a client a date will slip the moment you know, not the week it's due; scoping honestly even when it loses the deal; admitting a mistake plainly and fixing it.
- **Does not mean:** bluntness as a personality. Integrity is about accuracy, not tone.

04 · Impact

Technology is just a tool. What matters is what it changes — for our clients and for the world.

- **Looks like:** measuring the outcome, not the output; asking what a feature is actually for; choosing the boring solution that solves the problem over the impressive one that doesn't.
- **Does not mean:** grand claims. Impact is specific and usually small at first.

7. How we work — the process

Four stages, every engagement, no exceptions.

	STAGE	WHAT HAPPENS
01	Brief	The client tells us what they need. We listen, ask the right questions, and understand the real problem before touching a keyboard .
02	Scope	We define the work clearly. Realistic timelines. Honest deliverables. No scope creep, no surprises.
03	Build	We do the work. Software gets built, systems get secured, solutions get shipped. No status theatre .
04	Deliver	The client receives something that works, is documented, and is ready for the real world.

What this means day to day

- **Understand before building.** Questions early are cheap; rework is not.
- **Scope honestly.** If a timeline isn't realistic, say so during Scope, not during Build.
- **No status theatre.** Report real progress, including problems. Bad news early is a service; bad news late is a failure.
- **Document as you go.** Documentation is part of delivery, not an optional extra.
- **Secure from day one.** Not a phase at the end.
- **Respond within 24 hours.** That is the promise on our contact form. Honour it.

PART II — WHAT WE DO

8. Three business lines, one engine

FSLabs has three revenue lines. Understanding how they feed each other is the most important strategic idea in this document — it is why we are not simply an agency.

- **Services fund the company.** Client revenue pays for everything else. This is the engine.
- **Products prove we can do it.** An agency says it can build a marketplace. We point at TailorNow. Products are our portfolio, our R&D, and eventually our recurring revenue.
- **The Academy supplies the talent** that lets services scale past two founders — and produces alumni who become clients, referrers and hires.
- **Each one makes the others more credible.** A security firm that teaches ethical hacking is more believable. A training company whose instructors ship production systems is more believable. A product company that also consults understands business, not just code.

The strategic risk to name out loud: services revenue is the only one funding the others, and services capacity is capped by two founders. Everything in Part III is ultimately about relieving that constraint.

9. Service lines

Know these six. When someone asks what FSLabs does, this is the answer.

	LINE	IN ONE PHRASE	INCLUDES
01	Software Development	Custom-built. Production-ready.	Web & mobile apps · API development and integration · SaaS product development · legacy system modernisation
02	Cybersecurity	Protect what matters most.	Penetration testing and assessments · security audits and compliance · threat intelligence and monitoring · incident response and recovery
03	IT Consulting	Strategy meets execution.	Digital transformation strategy · technology roadmapping · IT infrastructure advisory · cloud architecture planning

	LINE	IN ONE PHRASE	INCLUDES
04	Tech Outsourcing	Scale your team, not your costs.	Dedicated engineering teams · staff augmentation · project-based outsourcing · DevOps and cloud management
05	Cloud Solutions	Modern infrastructure, built right.	Cloud migration · infrastructure as code · cost optimisation · managed cloud services
06	Data & Analytics	Turn data into decisions.	BI dashboards · data pipeline engineering · AI and ML integration · KPI reporting systems

Which of these matter most commercially? Cybersecurity and Tech Outsourcing are the two with the strongest recurring-revenue shape — security testing repeats on a cycle, and outsourced capacity bills monthly. Project software work pays well but ends. Bias the pipeline accordingly.

10. Products

PRODUCT	WHAT IT IS	WHY IT EXISTS
TailorNow (tailornow.shop)	Marketplace for custom fashion in Nigeria. Connects customers to verified tailors and creatives, and runs the whole order: discovery and portfolios, a style feed, booking, saved measurements, agreed pricing, payment with automatic split settlement to the creative, production tracking, fabric pickup and delivery, mutual ratings, disputes, plus group/aso-ebi and corporate uniform orders. 20% commission plus a 3% service charge.	Proves we can build and operate a real consumer marketplace with payments and logistics
HR & Payroll platform	Multi-tenant SaaS for Nigerian businesses: employees, departments, attendance, leave, documents, payroll records, audit logging, subscription billing.	Recurring revenue, and proves we can build enterprise-grade multi-tenant software
FSLabs Exchange	Crypto-to-naira and account services — USDT, gift cards and related requests, processed within about 30 minutes.	Proves we can operate something with money, speed and trust attached

Handle with care: the HR platform holds employee personal data and salary records. It carries the highest data-protection obligation of anything we run. Treat it accordingly.

11. FSLabs Academy

We train people into real engineering roles, taught by **practising FSLabs engineers** — not career instructors. The Academy is also our talent pipeline: strong graduates are people we can hire and

place with clients.

TRACK	FOCUS	INTRODUCTORY PRICE
Full Stack Development	Frontend · Backend · DevOps	₦180,000
Ethical Hacking Fundamentals	Cybersecurity · Penetration testing	₦175,000
Machine Learning Foundations	AI · Data science · Python	₦170,000
Backend Development	Servers · APIs · Databases	₦160,000
Frontend Development	UI · React · Responsive design	₦155,000
Prompt Engineering	AI tools · LLMs · Automation	₦150,000

Introductory pricing is active — launch rates, discounted from standard, with limited cohort sizes. We also run tailored one-on-one and small-group certification programmes, priced by goal.

Every student gets: live sessions · 3+ portfolio projects they own · an FSLabs-verified certificate · 1-on-1 mentorship · session recordings · lifetime alumni community access · placement referrals and career guidance · online-first delivery, in person on request.

If you teach for the Academy: you are the product. The promise is instruction from people who actually ship, and portfolio projects good enough to get someone hired. Hold that line.

12. Who we serve

Four audiences. They want different things and need to be spoken to differently — this section is especially for the content strategist.

A · The mid-to-large Nigerian enterprise

Banks, fintechs, oil & gas, telecoms, manufacturing, government agencies.

- **They care about:** reliability, security, compliance, someone senior being accountable, not being embarrassed by a vendor.
- **Their fear:** picking a small firm and getting let down.
- **Lead with:** the two-founder accountability model, security credentials, our own products as evidence, the documented-delivery standard.
- **Buys:** cybersecurity assessments, custom software, consulting, outsourced capacity.

B · The growing Nigerian SME

20–200 staff, digitising for the first time — moving off spreadsheets and WhatsApp.

- **They care about:** cost, speed, someone who explains things without condescension.
- **Their fear:** paying for something they don't understand and can't maintain.
- **Lead with:** plain language, fixed honest scope, the HR & Payroll platform as an off-the-shelf start, our "no status theatre" transparency.
- **Buys:** the HR platform subscription, small builds, cloud setup.

C · The Academy student

Career-changers and early-career developers who want a job, not a certificate.

- **They care about:** will this actually get me hired.
- **Their fear:** paying for a bootcamp that teaches theory and abandons them.
- **Lead with:** taught by engineers who ship, 3+ portfolio projects you own, placement referrals, the alumni network.
- **Buys:** a track, and later refers friends.

D · The partner

Payment providers, cloud and infrastructure providers, larger consultancies, investors.

- **They care about:** what we bring them — volume, reach, capability, a category they can't reach.
- **Lead with:** offer before ask. See the partnership brief in [docs/partnerships/summit-partnership-brief.md](#).

Who we are not for

Saying this clearly protects the brand and saves everyone's time:

- Anyone shopping purely on lowest price. We are not the cheapest and should never pretend to be.
- Anyone who wants a body-shop that takes instructions without asking why.
- Anyone who wants work done in a way we consider insecure or dishonest.

PART III — WHERE WE ARE GOING

Everything in Part III is [DRAFT — needs founder approval]. The **shapes** are proposals worth arguing with; the **numbers** are deliberately blank because inventing them would be worse than leaving them open. Samuel and Akinbayo fill in the blanks; then this becomes the company's plan and the content strategist can build against it.

13. How we set goals

One goal per business line, plus one company-level goal. Four total. Not twelve — four, so everyone can remember them.

Each goal needs: a number, a date, and one named owner. A goal without all three is a wish.

14. Draft objectives — next 12 months

Company goal — break the two-founder ceiling

Services capacity is capped by two people, and every other ambition depends on that changing.

- Reach the point where **___ % of delivery work** can be executed by non-founder capacity — Academy alumni, contractors, or hires — **without dropping the standard in \$5**.
- Have **___ vetted people** we can put on client work at short notice.
- Keep founder involvement in every project at the level clients are promised: both founders accountable, even when they are not the ones typing.
- **Owner:** both founders.

Services goal — recurring over one-off

- Move from project-by-project revenue to retainers: **___ % of monthly operating cost covered by recurring revenue** (security retainers, managed cloud, outsourcing contracts) by **___**.
- Land **___ enterprise clients** in the priority sectors from §12A.
- **Owner:** Akinbayo.

Products goal — from proof to profit

- Get one product from "portfolio piece" to "pays for itself": in monthly recurring revenue from the HR & Payroll platform by .
- TailorNow: **verified creatives** and **orders/month** — pick the single metric that actually indicates health and track only that one.
- Decide explicitly whether FSLabs Exchange is a growth line or a maintained service. Ambiguity here costs attention.
- **Owner:** Samuel.

Academy goal — cohorts and outcomes

- Run **cohorts** with **students** total by .
- The number that matters most is not enrolment, it is **placement**: **% of graduates in a paid role or referral within months**. Publish it once it's good.
- Convert **alumni** into people we can staff on client work — this is where the Academy goal and the company goal meet.
- **Owner:** to assign.

15. The metrics that matter

Track few things, honestly. Suggested minimum:

LINE	THE ONE NUMBER	WHY THIS ONE
Services	Recurring revenue as % of monthly cost	Tells you whether the company survives a slow month
Services	Proposal-to-close rate	Tells you whether the pitch or the pricing is the problem
Products	Paying subscriptions (HR platform)	The only product number that isn't vanity
TailorNow	Completed orders per month	Captures supply, demand and trust in one figure
Academy	Graduate placement rate	The promise we make; measure the promise
Delivery	On-time delivery against scoped date	Integrity (\$6.03) made measurable
Brand	Inbound enquiries per month	Whether the content plan is working

16. What we are deliberately not doing yet

Naming this prevents drift, and it tells the content strategist what not to promise.

- Not expanding outside Nigeria until the delivery constraint in §14 is solved.

- Not adding a seventh service line. Six is already wide for our size.
 - Not competing on price.
 - Not building new products until an existing one pays for itself.
-

PART IV — REPRESENTING FSLABS

17. The pitch, at three lengths

Ten seconds — when someone asks what you do:

FSLabs is a Nigerian technology and cybersecurity company. We build software, secure systems, train engineers, and run our own products.

Thirty seconds — the version with the hook:

FSLabs is a technology and cybersecurity company in Lagos. We do software development, security, cloud and data work — and unlike most firms, both founders work directly on every project. Nothing gets handed to junior contractors. We also build our own products, like TailorNow, and we train engineers through FSLabs Academy.

Two minutes — the version that wins a meeting:

Most technology firms sell you senior people and deliver junior ones. The people who won the pitch

disappear after kick-off, and the work goes to whoever is free. That gap is where projects die.

FS Labs is built to remove it. We're a two-founder company — Samuel on the technical side, cybersecurity and full-stack; Akinbayo on strategy and delivery — and both of us are on every engagement. Six service lines: software, cybersecurity, IT consulting, tech outsourcing, cloud and

data.

We work in four stages: Brief, Scope, Build, Deliver. We won't scope a timeline we don't believe,

and we report real progress rather than status theatre. What you get at the end works, is documented, and is ready for production — that's the standard we hold ourselves to.

And we don't just consult. We build and run our own products — a fashion marketplace with payments

and logistics, an HR and payroll platform, an exchange. So when we say we can build something, we

can point at it. We also run an academy training engineers, which is how we grow without lowering

the bar.

18. How to defend the company

You will get these objections. Have the answer ready. Never bluff — every answer below is true.

"You're only two people. Can you actually handle our project?"

That's exactly why the work gets done properly. You're not a small account to us, and you're never

handed to someone junior. Where we need extra capacity we bring in vetted people — often our own

Academy graduates — but the founders stay accountable for delivery. If a project is genuinely beyond what we can do well, we'll tell you during Scope rather than take your money.

"You're new. What's your track record?"

Look at what we run ourselves. TailorNow is a live marketplace handling payments, split settlement to vendors, and delivery logistics. We built an HR and payroll platform holding real employee and salary data. And an exchange processing requests in about thirty minutes. Most firms our size have a portfolio of other people's brochure sites. We have production systems we operate ourselves.

"Why you instead of a big firm?"

With a big firm you get their process and their B-team. With us you get both founders and no layers. We're faster, we're accountable, and we'll tell you no. If you need a thousand-person global rollout, use them. If you need something built properly by people who answer the phone, use us.

"Why should we trust a Nigerian firm with this?"

Because we're held to the same standard as anyone else and we've chosen to be. Security from day one, documented delivery, honest timelines. Being local is an advantage — we understand Nigerian payments, Nigerian regulation and Nigerian users in a way an offshore team doesn't. And we're in the same time zone as your business.

"A freelancer quoted me a fraction of that."

They probably will build something. The question is what happens in month six — when it needs to scale, when it gets attacked, when the freelancer has moved on and there's no documentation. We're not the cheapest and we don't try to be. We're the option where it still works next year.

"Is our data safe with you?"

Security is our founder's own discipline, not a subcontracted extra — we do penetration testing and security audits as a service line. We build secure from day one rather than bolting it on at the end. And what we find on your systems never leaves FSLabs.

"What if something happens to one of you?"

Fair question, and it's why the Academy and our vetted bench exist — we're deliberately building capacity beyond the two of us. Everything we deliver is documented, so nothing lives only in someone's head. That's part of why documentation is in our definition of finished.

"Can you deliver on time?"

We scope timelines we believe, which sometimes means quoting longer than you'd like. If something is going to slip, you hear it the moment we know — not the week it's due. Ask us for a date we can't hit and we'll say so.

If you don't know the answer

Say so, and say what happens next: *"I don't want to guess at that — let me get you a proper answer from Samuel today."* That is a stronger answer than a confident wrong one, and it is what Integrity (§6.03) means in practice.

19. How we sound — voice guide

For the content strategist, and for anyone writing anything with our name on it.

We sound like: a senior engineer who respects your time. Direct, specific, calm. Confident without swagger. We make claims we can back and we name real things.

DO	DON'T
Short sentences. Concrete nouns.	Long paragraphs of adjectives.
Name the actual thing — "split settlement to the tailor's bank account"	Vague benefit-speak — "seamless payment experiences"

DO	DON'T
Say what we did and what happened	Say we are "passionate about excellence"
Admit limits — "we don't do X"	Imply we do everything
Active voice. "We built", "we found", "we fixed"	"Solutions were delivered"
Nigerian context, plainly stated	Pretending to be a US firm

Words that are ours: execution · standard · accountable · documented · secure from day one · no status theatre · both founders · works in the real world.

Phrases to avoid: *cutting-edge, synergy, world-class* (as an empty adjective — the mission uses it as a commitment, which is different), *leverage* as a verb, *revolutionary, game-changing, one-stop shop, passionate about, at the end of the day*.

On the tagline: "Your Vision. Our Execution." is the line. Don't rewrite it, don't extend it, don't make variations of it.

20. Content pillars — a starting brief for the strategist

Five pillars, each mapping to an audience from §12 and a goal from §14. This is a starting point to argue with, not a finished plan.

1. Proof of delivery (→ *enterprise; services goal*) Build-in-public teardowns of our own products. How TailorNow's split settlement works. How we handled a real production problem. Nothing sells a services firm like visible competence.

2. Security literacy (→ *enterprise; the recurring-revenue push*) Plain-English explanations of the threats Nigerian businesses actually face. What a penetration test finds. What NDPA compliance requires in practice. This positions the highest-margin, most repeatable service line, and Samuel is genuinely credentialed to author it.

3. Digitisation for SMEs (→ *SME; HR platform revenue*) Moving payroll off spreadsheets. What attendance tracking actually costs you when it's manual. Aimed squarely at the HR & Payroll platform's buyer.

4. Careers in tech, honestly (→ *Academy students; Academy goal*) What it actually takes to get hired. Graduate stories and where they ended up. Portfolio project walkthroughs. The differentiator to press: taught by engineers who ship, and placement outcomes we are willing to publish.

5. The FSLabs way (→ *all; brand*) The two-founder model. Why we scope honestly. Why documentation is part of finished. This is the pillar that makes the other four believable, and it's the one nobody else can copy.

What the strategist needs from the founders before planning

- The blank numbers in §14 filled in — you cannot plan content toward an unstated goal.
- Which service line to push hardest for the next quarter.
- Named client stories we have permission to publish (see §21).
- Whatever traction numbers we are willing to state publicly.
- Access to Samuel for technical authoring — pillars 1 and 2 need his voice, and they are the two that convert enterprise buyers.

21. Rules and boundaries

These are not negotiable.

- **FSLabs is FSLabs.** Never present another company — a client's or anyone else's — as part of FSLabs, as a sister brand, or as one of our products. Our portfolio is TailorNow, the HR & Payroll platform, and FSLabs Exchange. Nothing else.
 - **A product is not the company.** TailorNow is a product of FSLabs. When we say "the company", we mean FSLabs.
 - **Never name a client** — in a deck, on social media, in a portfolio, or in conversation outside FSLabs — without confirmed permission.
 - **Client code, client pricing and our internal delivery economics stay inside FSLabs.**
 - **Security findings never leave.** What we find on a client's systems is theirs and ours, nobody else's.
 - **No timeline commitments without Akinbayo.**
 - **Naming:** FSLabs, one word. The company is Folub and Samuel Labs.
-

PART V — JOINING FSLABS

22. Your first week

Day 1 — Understand the company. Read this handbook end to end. Read `docs/ABOUT_FSLABS.md`. Visit fslabs.tech and read every page as a client would.

Day 2 — Understand the products. Use TailorNow as a customer. Click through the HR platform. Try the Exchange flow. You cannot represent what you have not used.

Day 3 — Understand the work. Sit with your founder contact (§23). Get access to the systems your role needs. Read the codebase or the client material relevant to you.

Day 4 — Understand the standard. Go through §5, §7 and §18 with a founder. Practise the thirty-second pitch out loud until it doesn't sound rehearsed.

Day 5 — Contribute. Ship something small. It will be reviewed against §5, not against effort.

By the end of week one you should be able to

- ☐ Say what FSLabs is in one sentence, without notes
- ☐ Name all six service lines
- ☐ Name our three products and what each one does
- ☐ Explain the four-stage process and why "no status theatre" matters
- ☐ State the delivery standard: works, documented, ready for the real world
- ☐ Answer at least three of the objections in §18 convincingly
- ☐ Know what you must never say or share (§21)
- ☐ Know which founder to go to for what (§23)

23. Who to go to

FOR	GO TO
Architecture, security, technical decisions, code review	Adeseko Samuel
Clients, scope, pricing, timelines, partnerships, anything commercial	Akinbayo
Anything you're unsure about	Ask early — either founder. Both are on every project; use that.

General enquiries: **folubandsamuel@fslabs.tech** — and the promise on our contact form is a response within 24 hours.

24. Open decisions — needed from the founders

This handbook is complete on identity and incomplete on operations. These items must come from Samuel and Akinbayo; they are blank rather than guessed.

- ☐ **Approve or rewrite the vision statement (§3)**
- ☐ **Fill in the goal numbers, dates and owners (§14)** — the single biggest unblock in this document
- ☐ Confirm which service line is the priority push this quarter
- ☐ Working hours, location and remote-working expectations
- ☐ Leave policy and how to request it
- ☐ Pay cycle and expense claims
- ☐ Onboarding access checklist — accounts, tools, permissions by role
- ☐ Security and acceptable-use policy, including what may be put into third-party AI tools
- ☐ Confidentiality and IP terms for staff, contractors and Academy instructors
- ☐ Escalation path for a client incident or security breach
- ☐ The official company phone number
- ☐ Named client stories we may publish
- ☐ Academy goal owner
- ☐ An org chart, once the team is larger than the founders
